In this lab you are going to re-create Students.html and Register.html from **Week 2 Lab** (https://calstatela.instructure.com/courses/130849/assignments/2571868) using **Bootstrap** (https://getbootstrap.com/) so they look like the following:

- **Students on large screen** (https://mynotes.cysun.org/files/view/1003384)
- **Students on smaller screen** (https://mynotes.cysun.org/files/view/1003383)
- **Register on large screen** (https://mynotes.cysun.org/files/view/1003381)
- **Register on smaller screen** (https://mynotes.cysun.org/files/view/1003380)

For styling, you must use exclusively what's provided by Bootstrap - that is, you may not use any additional stylesheet (internal or external) or inline style.

1. Header, footer, and breadcrumb (30pt)

On both pages, the navigation bar should be implemented using Bootstrap **Navbar** (https://getbootstrap.com/docs/5.3/components/navbar/) . The navigation bar is expanded on large screen, and is collapsed into a "hamburger menu" on smaller screen.

"Students" and "Register" below the navigation bar should be styled with Bootstrap **Breadcrumb** (https://getbootstrap.com/docs/5.3/components/breadcrumb/) .

Use Bootstrap utilities like **Background** (https://getbootstrap.com/docs/5.3/utilities/background/) , **Spacing** (https://getbootstrap.com/docs/5.3/utilities/spacing/) , and **Text** (https://getbootstrap.com/docs/5.3/utilities/text/) to style the footer so it has a light background with center-aligned text and reasonable padding/margin.

2. Students.html (25pt)

The dropdown list, button, and table should be styled with Bootstrap **Select** (https://getbootstrap.com/docs/5.3/forms/select/) , **Button** (https://getbootstrap.com/docs/5.3/components/buttons/) , and **Table** (https://getbootstrap.com/docs/5.3/content/tables/) , respectively. Note that the table should have striped rows.

HINT: to prevent the dropdown list from taking up full page width, you can put the dropdown list and the button inside a `<div>` with the `d-inline-flex` class.

3. Register.html (40pt)

The form should be styled with Bootstrap **Form (https://getbootstrap.com/docs/5.3/forms/overview/)** and **Button (https://getbootstrap.com/docs/5.3/components/buttons/)** . Note that the form layout is responsive: the form fields take up half of page width on large screen, and full page width on smaller screen.

4. (15pt) Use the Cerulean theme from **Bootswatch (https://bootswatch.com/)** . I recommend that you first create the page with regular Bootstrap, then replace the link to Bootstrap CSS with one for the Cerulean theme.

5. Upload the HTML files to your CS3 account and make sure that they work properly on CS3. Create another HTML file lab4.html which contains hyperlinks to your pages on the CS3 server. Upload all HTML files to Canvas. Not deploying or submitting the assignment properly will incur a penalty of up to -10pt.
